EDUCATION

Polytechnic University of the Philippines - Manila

Sep 2022 – Sep 2026

Bachelor of Science in Computer Science

- *GWA – 1.40, Consistent academic achiever*

WORK EXPERIENCE

Lamina Studios LLC.

July – August 2025

Full Stack Web Developer Intern

- Developed a full-stack Laravel platform with role-based access control across 3 permission tiers, building a responsive admin dashboard using Blade templating and Radix UI.
- Built a Python (Flask) REST API integrated with a proximity-alert application, triggering notifications based on real-time distance thresholds as tracked vehicles approached a facility.
- Deployed the application across two independent server environments: Windows Server (IIS) and Ubuntu (LAMP) via VirtualBox, gaining hands-on exposure to cross-platform deployment and infrastructure configuration.

PROJECTS

NestGuard Pest Control Service Platform 🌀 *(Next.js 15, Typescript, Supabase)* **2026**

- Architected a full-stack service platform using Next.js 15 Server Actions in place of traditional REST routes, secured with Supabase Auth (JWT sessions), PostgreSQL Row-Level Security (RLS), Role-Based Access Control (RBAC), and Cloudflare Turnstile bot protection.
- Designed a relational PostgreSQL schema powering an admin dashboard with live Recharts visualizations tracking revenue and completion-rate KPIs, alongside a bug-report system where users submit issues via Supabase and admins triage them through a status queue.
- Built an automated quoting pipeline using Nodemailer, triggered via Server Action, that generates and delivers itemized quotation emails within 2 seconds of submission.

AEYE - Cataract Maturity Tool 🌀 *(Flutter, PyTorch, Firestore)* **2025**

- Designed and built A-EYE, a custom radial-aware transformer extending MobileViT for cataract maturity classification, achieving 93.94% accuracy on a 165-image validation set (a 1.21% improvement over the standard MobileViT baseline).
- Engineered a radial tokenization scheme with semantic augmentation (BSDA), reducing computational cost by 38.3% fewer GFLOPs while increasing recall by 2.75%, and validated clinical reliability against expert ophthalmologist annotations.
- Deployed the dual-model system as a hosted inference API on Hugging Face Spaces, integrated into the Flutter app via a dedicated API service layer, and distributed as a public Android APK via GitHub.

Personal Developer Portfolio 🌀 *(Next.js 15, TypeScript, Tailwind)* **2026**

- Engineered and deployed a high-performance, SEO-optimized portfolio featuring dynamic routing for project deep-dives, achieving a perfect 100 Lighthouse performance score (0.2s FCP, 0.4s LCP, 0 CLS).
- Developed an adaptive media component to render mobile and desktop demos seamlessly across device breakpoints without layout shift.

- Implemented a centralized data architecture ensuring a single source of truth for site-wide content, simplifying updates across all project pages.

Phishing Please (Unity, C#)

2024

- Engineered the entire C# codebase and Unity scene architecture for a 7-level point-and-click educational game focused on phishing awareness, play tested by a group of 57 users to validate level progression and gameplay clarity.
- Developed custom gameplay mechanics, including a dynamic shield system, state management, and complete level progression logic.
- Deployed the final product as a fully playable Android APK on itch.io, accumulating 112 page views and 33 browser plays since release.

SKILLS AND TECHNOLOGIES

Programming: Python, JavaScript/TypeScript, Java, C#, C, PHP, Dart, SQL

Frameworks & Libraries: Next.js, React, Laravel, Flask, Flutter, Unity, PyTorch

Databases & BaaS: PostgreSQL, MySQL, SQLite, Firebase, Supabase

Tools & DevOps: Git, Linux (LAMP), Android Studio, Vercel, Nodemailer, Cloudflare Turnstile
